

REVIT FOUNDATION TEMPLATE

Migrate Legacy CAD Standards to Revit

What is ATG's Revit Foundation Template Package?

The first steps in a "best practices" implementation of Revit Architecture, Revit MEP, or Revit Structure is to consolidate your existing legacy CAD Standards, migrating your approved graphic standards to a Revit Foundation Template, and delivering your new "Electronic CAD Standards Manual". The Revit Foundation Template Package gives you a head start at the beginning of a Revit implementation, providing a basis to continue building your firm's skills, content, and revenue on Revit and BIM projects.

Combining this package with ATG's Custom, Classroom, Virtual Mentoring, or Self-Paced E-Training provides the smoothest path of migration from legacy 2D design methods and documentation to new workflows in Revit. ATG consultants and trainers will first create a template containing your existing approved standards and then customize your training objectives optimized for your firm's projects, user skill levels, and business goals. By starting your training program with pre-configured settings in your Revit Foundation Template, users are able to spend more time learning to design, and less time on tedious drawing setup.

Benefits

- Beginning a Revit implementation using industry best practices
- Automating tedious and repetitive drafting tasks
- Optimizing training time for new users
- Allowing efficient central management of CAD standards

REVIT FOUNDATION TEMPLATE

Migrate Legacy CAD Standards to Revit

Revit Foundation Template contains the following Revit components and settings configured to match your graphic standards:

- Working Units (Metric/Imperial)
- (5) Named Views and Sheets
- (5) Line Styles
- (5) Fill Patterns
- (5) Line Weights
- (2) Drawing Title blocks
- (3) View Display
- (2) Wall Types
- (1) General Notes / Legends
- (2) Standard Details in Drafting Views
- (1) Default Families Loaded
- (3) Annotation Symbol Styles
- (3) View Templates
- (1) Properly Formatted Schedules
- (3) Default Loaded Tags
